

Billet Oil Filter Adapter

Custom oil filter adapter for all Ecotec style engines (2.0L, 2.2L, 2.4L, L61, LSJ, LE5, LNF). This adapter bolts in place of the factory oil filter cap and is tapped for two -10AN o-ring fittings.

Due to manufacturing processes beyond our control, not all GM Ecotec blocks are tapped the same. If your CBM-10813 clocks under the intake manifold and you cannot install fittings, please follow the steps below. This will clock the adapter approximately 1/4" turn counter clockwise.

CBM-10813

Large shim lays flat on lip, then large o-ring goes in groove above large shim. Small shim lays flat in recess, then adapter tube pushes into recesses.

Shims are not necessary in all applications.
Shims are colored red for illustration purposes.
